

Задание 1. Считаем, сколько пользователей в списке данных

```
# Создаём список users с информацией о пользователях
users = [
    {"name": "Alice", "downloaded": True, "purchased": True, "time_spent":
120, "last_activity": "2023-10-01", "viewed": True},
    {"name": "Gena", "downloaded": True, "purchased": False, "time_spent":
60, "last_activity": "2023-09-30", "viewed": True},
    {"name": "Oleg", "downloaded": True, "purchased": False, "time_spent":
0, "last_activity": "2023-10-03", "viewed": False},
    {"name": "Max", "downloaded": True, "purchased": True, "time_spent":
90, "last_activity": "2023-10-04", "viewed": True},
    {"name": "Lena", "downloaded": False, "purchased": False, "time_spent":
0, "last_activity": "2023-10-05", "viewed": False},
    {"name": "Ivan", "downloaded": True, "purchased": False, "time_spent":
45, "last_activity": "2023-10-06", "viewed": True},
    {"name": "Kate", "downloaded": True, "purchased": True, "time_spent":
150, "last_activity": "2023-10-07", "viewed": True},
    {"name": "Sergey", "downloaded": True, "purchased": False,
"time_spent": 30, "last_activity": "2023-10-08", "viewed": False},
    {"name": "Maria", "downloaded": False, "purchased": False,
"time_spent": 0, "last_activity": "2023-10-09", "viewed": False}
]

# Используем функцию len() для подсчёта количества пользователей
count_users = len(users)

# Выводим результат
print("Количество пользователей в списке:", count_users)
```

Задание 2. Выводим информацию о каждом пользователе

```
# Используем список users изЗадания 1
users = [
    {"name": "Alice", "downloaded": True, "purchased": True, "time_spent":
120, "last_activity": "2023-10-01", "viewed": True},
    {"name": "Gena", "downloaded": True, "purchased": False, "time_spent":
60, "last_activity": "2023-09-30", "viewed": True},
    {"name": "Oleg", "downloaded": True, "purchased": False, "time_spent":
0, "last_activity": "2023-10-03", "viewed": False},
    {"name": "Max", "downloaded": True, "purchased": True, "time_spent":
90, "last_activity": "2023-10-04", "viewed": True},
    {"name": "Lena", "downloaded": False, "purchased": False, "time_spent":
0, "last_activity": "2023-10-05", "viewed": False},
    {"name": "Ivan", "downloaded": True, "purchased": False, "time_spent":
45, "last_activity": "2023-10-06", "viewed": True},
    {"name": "Kate", "downloaded": True, "purchased": True, "time_spent":
150, "last_activity": "2023-10-07", "viewed": True},
    {"name": "Sergey", "downloaded": True, "purchased": False,
```

```
"time_spent": 30, "last_activity": "2023-10-08", "viewed": False},
    {"name": "Maria", "downloaded": False, "purchased": False,
"time_spent": 0, "last_activity": "2023-10-09", "viewed": False}
]

# Проходим циклом по каждому пользователю и выводим имя и время в
приложении
for user in users:
    print(user["name"], "-", user["time_spent"], "минут")
```

Задание 3. Создаем список, который будет содержать только конкретных пользователей

```
# Используем список users из Задания 1
users = [
    {"name": "Alice", "downloaded": True, "purchased": True, "time_spent":
120, "last_activity": "2023-10-01", "viewed": True},
    {"name": "Gena", "downloaded": True, "purchased": False, "time_spent":
60, "last_activity": "2023-09-30", "viewed": True},
    {"name": "Oleg", "downloaded": True, "purchased": False, "time_spent":
0, "last_activity": "2023-10-03", "viewed": False},
    {"name": "Max", "downloaded": True, "purchased": True, "time_spent":
90, "last_activity": "2023-10-04", "viewed": True},
    {"name": "Lena", "downloaded": False, "purchased": False, "time_spent":
0, "last_activity": "2023-10-05", "viewed": False},
    {"name": "Ivan", "downloaded": True, "purchased": False, "time_spent":
45, "last_activity": "2023-10-06", "viewed": True},
    {"name": "Kate", "downloaded": True, "purchased": True, "time_spent":
150, "last_activity": "2023-10-07", "viewed": True},
    {"name": "Sergey", "downloaded": True, "purchased": False,
"time_spent": 30, "last_activity": "2023-10-08", "viewed": False},
    {"name": "Maria", "downloaded": False, "purchased": False,
"time_spent": 0, "last_activity": "2023-10-09", "viewed": False}
]

# Создаём пустой список для активных пользователей
active_users = []

# Проходим циклом по всем пользователям
for user in users:
    # Проверяем условие: время в приложении больше 30 минут
    if user["time_spent"] > 30:
        active_users.append(user)

# Выводим результат
print("Пользователи, прошедшие в приложении более 30 минут:")
for user in active_users:
    print(user["name"], "-", user["time_spent"], "минут")
```
